

# Kwantlen Teaching Aid

Cloverdale, British Columbia

Silver City Galvanizing, Inc.

Located on the grounds of Kwantlen Polytechnic University in British Columbia, the Kwantlen Teaching Aid structure is comprised of various steel connections used as a teaching tool for the detail and engineering students. All fasteners and beams on this structure were galvanized, which will protect the teaching tool from the damaging effects of outdoor exposure to rain, sun, and snow.

In addition to teaching students the engineering principles pertaining to the structure, professors should note the hot-dip galvanized coating will remain corrosion and maintenance free for generations, as well as being the only sustainable, 100% recyclable corrosion protection system available to today's green-minded consumer.
