

# Pier 15

New York City, New York

This project was right on the river in a harsh environment and galvanizing was the perfect fit for both visual and coating. Turnaround time was very important, and the galvanizer turned this project around in 48 hours per truckload.

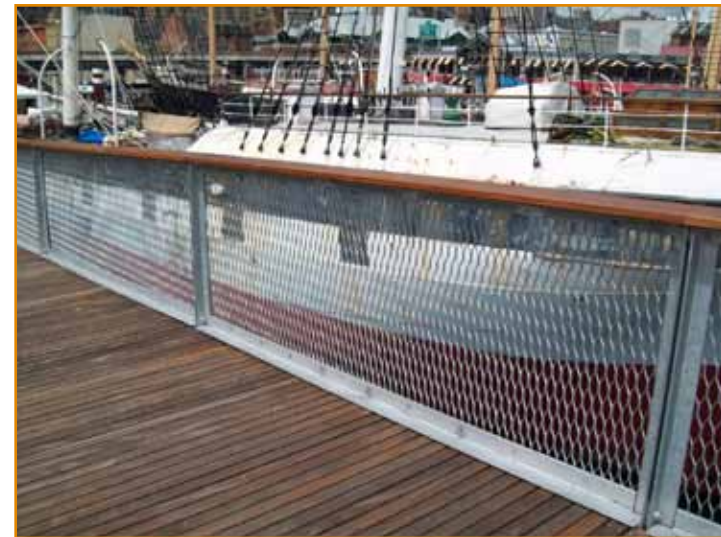

There were mesh panels the customer was concerned would warp, but the galvanizer took great care in making sure they remained uniform. The project is very visible to the public, with a public park and riverwalk with a lot of pedestrian traffic.
