TOUCH-UP AND REPAIR OF GALVANIZED STEEL
PRODUCT SUPPLIERS

TOUCH-UP AND REPAIR OF GALVANIZED STEEL

PRODUCT SUPPLIERS

One of the greatest benefits of hot-dip galvanizing is the barrier and cathodic protection afforded to the steel. Small scratches in the galvanized surface present little or no problem because the zinc will allow itself to be preferentially consumed, keeping the underlying steel rust-free. However, where large portions of the zinc coating have been damaged due to drilling, welding, transporting or constructing mishaps, it's important to touch-up or repair the damaged section.

Touch-up and repair of galvanized steel, to meet ASTM A780 *Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings*, can be completed in three different ways, including the use of zinc-rich paint, zinc solders and/or zinc metallizing. This list of suppliers provides information about companies with touchup and repair products. Individual companies should be contacted for product information.

Inclusion of a supplier on this list does not indicate that suppliers' materials meets ASTM A780. Omission from this list does not mean that material supplied by a company does not meet ASTM A780. Efforts have been made to provide a comprehensive list, however qualified suppliers may have been inadvertently omitted.

The American Galvanizers Association (AGA) does not endorse any listed supplier. No tests have been performed on the suppliers' materials by the AGA. No warranty as to suitability of the product for galvanizing repair is made by the AGA. The information is provided as a service to the user of hot-dip galvanized material. Use of the information is entirely left to the discretion of the consumer or specifier.

Companies listed with the AGA logo are AGA members.

ZINC-BASED SOLDER

ALL METAL SUPPLY

Galvanize Repair Stick; #ZH430-6500

600 Ophir Road
Oroville, CA 95966
530.533.3445
